Adobe Experience Manager

Q&A - Oracle Java Support for Adobe Experience Manager (AEM)

AEM Product Management and Product Marketing, March 2022

Adobe supports its customers with the provision and technical support of Java SE for the development and operation of AEM applications, including all maintenance updates of Long-Term Support (LTS) releases (Oracle Java SE 8 and Oracle Java SE 11). All AEM customers are entitled to use Oracle Java tec

Yes, as long as the use is for developing and running their AEM applications and as long as the developers agree to Oracle's terms of use.

Can Oracle Java SE be used for the tools allowing my customer to build and to compile AEM applications?

Oracle Java SE may be used to compile Java code to be deployed to an AEM server running with the Oracle JDK. However, the Oracle JDK cannot be used as such for running third party applications like Jenkins or other Java-basedapplications, that require their own license.

Can Oracle Java SE be used to run my J2EE AEM Forms server?

Yes.

Can Oracle Java SE be used to run non-AEM applications hosted by the same application server used for running AEM?

No, a separate license will be needed if it's not an AEM (or Adobe) application.

Where can AEM customers download the latest relea-(wn)2⊤4⊦4⋅04m 761(i324⊤n -2 O() -2( ) 1( ) --2 (t) -2 ( ) -1(a) 04e) -1(r) i

Can I continue to use Oracle Java SE?

Yes. Oracle JDK's will continue to be supported for AEM.
